NETWORKS
AN INTERNATIONAL JOURNAL

Subject Index to Volume 28, 1996

AB-vulnerability threshold function, 125
Achromatic number, 45
Ahuja=Orlin=Tarjan algorithm, 211
Approximation scheme, Steiner tree problems, 187

Bayesian networks, discrete, efficient symbolic propagation, 31
Binary directed de Bruijn graph, 7
Blocking probability, 21
Bottleneck graph partition problem, 221
Bounded fault model, 143
Bourjolly=Pulleyblank algorithm, 211
Broadcasting
  fault-tolerant, 143
  MLH, 157
Chromatic number, 45
Circular-arc graphs, maximum independent sets, 15
Communication networks
  cyclic gossiping times, 135
  fault-tolerant broadcasting and gossiping, 143
  linearly bounded forwarding index, 177
Conditional diameter, graphs and digraphs, 97
Connectivity, graphs and digraphs, 97
Continuous subtree location model, 167

de Bruijn graphs, 2-diameter, 7
Decomposition, general financial equilibria with transaction costs, 107
Decomposition algorithm, general financial equilibrium model, 107
Diametrical number, 181
Digraphs
  conditional diameter, 97
  connectivity, 97
Discrete Bayesian networks, efficient symbolic propagation, 31
Disjoint connecting paths problem, 125
Divide-and-conquer algorithms, graph-layout problems, 69
Dynamic uncapacited facility location problem, 117

Earliest-finish σ-paths, 125
Eccentricity, vertices in graphs, 181
Edge-scheduled networks, 125
Euclidean Steiner minimal tree, 187

Forwarding index, linearly bounded, 177

General financial equilibrium model, with transaction costs, network decomposition, 107
Gilbert=Steiner problem, 55
Gossiping
  fault-tolerant, 143
  times, cyclic, 135
Graph-layout problems, divide-and-conquer algorithms, 69
Graph partition problem, bottleneck, 221
Graphs
  asymptotically optimal, 177
  bandwidth-2 recognition, 69
  conditional diameter, 97
  connectivity, 97
  cutwidth-3 recognition, 69
  cyclic gossiping times, 135
  eccentric vertices, 181
  magic labeling, 211
  minimal rankings, 45
  from projective planes, 177
  series-parallel, 2-page embedding, 69

Hierarchical hypercube network, 157
Hypercubes, partially replicated data, minimizing message complexity, 87

Lagrangian relaxation, 117

Magic labeling, graphs, 211
Menger's theorem, generalization, 125
Mesh topologies, 195
Message complexity, minimizing, partially replicated data on hypercubes, 87
Minimum covering criterion, obnoxious facility location, 1
MLH, 157
Multicasting, MLH, 157
Multilevel Hypercube network, 157

Numeric canonical components method, 31

Obnoxious facility location, minimum covering criterion, 1

Partially replicated data, on hypercubes, minimizing message complexity, 87
Polynomial-time approximation scheme, Steiner tree problems, 187
Probabilistic fault model, 143

Quasi torus networks, routing, 195
QuasiXY, 195
Queueing networks, state-dependent, topological network design, 55

Radial number, 181
Rankings, minimal, 45
Rectilinear Steiner minimal tree, 187
Regularizable graphs, 211
Routing
  communication networks with linearly bounded forwarding index, 177

MLH, 157
quasi torus networks, 195
Routing algorithms, switching networks with probabilistic traffic, 21

Scheduled networks, vulnerability, 125
Split graphs, rank parameters, 45
Steiner tree problems, approximation scheme, 187
Switching networks, probabilistic traffic, 21
Symbolic propagation, efficient, discrete Bayesian networks, 31

Topological network design, state-dependent queueing networks, 55
Torus networks, quasi, routing, 195
Tree network, central facility location, 167
Tree-shaped facility, location, 167
Tutte decomposition, 69

Vertices
eccentric, graphs, 181
load, 177
